HOW TO GET SERVICE

This package provides a menu for requesting DRMS International (DRMSI) contracting services in the area of HM/HW disposal.

Requesting the services defined in this package initiates DRMSI action to contract for those services on your behalf. If a particular service is unavailable in your area we will let you know. Also, if your requirement changes significantly, <u>you</u> need to let us know.

To get the support you need, we must receive:

- Generator Identification and Certification Form (p. 5)
- Pickup Points/Addresses (p.6)
- Background Issues Information (pp. 7,8)
- Service CLINs Information (pp. 9-12)
- A completed copy of Estimated Services/Disposal Requirements, Attachment 1

Submit your data to your local DRMO or to the appropriate point of contact indicated below.

<u>Zone</u>	Zone Environmentalist	DRMSI-H Point of Contact
Mediterranean	Bill Davidson DSN 624-2462 bdavidso@nassig.sicily.navy.mil	Pat Sibell DSN 338-7753 psibell@wiesbaden-ex.drms.dla.mil
Germany Benelux	Donna Ratzel DSN 483-6051 dratzel@ktown-ex.dla.mil	Terry Christy DSN 338-7339 tchristy@wiesbaden-ex.drms.dla.mil
Atlantic	Bonnie Murphy DSN 268-2634 sqaa086@molesworth-ex.drms.dla.mil	Lisa Jayne DSN 338-7343 ljayne@wiesbaden-ex.drms.dla.mil
Asia - Korea/Okinawa	Dennis Fleener DSN 637-4311 ssta008@okinawant-ex.drms.dla.mil	Joe Cook DSN 268-4693 ssea104@sagamint-ex.drms.dla.mil
Asia – Mainland Japan	Robert Davis DSN 268-4856 ssea086@ssea01.drms.dla.mil	Joe Cook DSN 268-4693 ssea104@sagamint-ex.drms.dla.mil
Southwest Asia	Sam Swearingen CIV 00971-243-6691 X 2439 sswearingen@europe.dla.mil	Dennis Baxter DSN 338-7752 dbaxter@wiesbaden-ex.drms.dla.mil

Questions, comments, or suggestions may be entered on the enclosed quantity certification form (or attached pages), or you may contact the DRMSI office mentioned above.

Menu of Services June 2000 Page 3 of 20

If there are any other environmental services that you wish the DRMO to attempt to obtain on your behalf not listed in the following pages please identify on a separate page and attach to your submission.

PICKUP POINTS/ADDRESSES

It is critically important that complete addresses/locations be specified whenever a variety of pick-up locations on different installations are used. Please annotate below **all** pickup locations (Hazardous Waste Accumulation Points (HWAPs) or Hazardous Waste Storage Areas (HWSAs)) where the contractor must pickup wastes or perform services. (An example is shown below.) If special permission is required to access any site or if specialized equipment is needed for removal of waste, attach a separate sheet explaining the details.

Site Name	Site Street Address	Site City/State/Zip	Generator ID #

BACKGROUND ISSUES

- **1. <u>SCHEDULE OF SERVICES</u>** DRMSI contracts for services using estimated disposal requirements based on waste stream identifications, the physical state of a waste, and the types of containerization. A copy of this table is included at Attachment 1.
- **2. REMOVAL PERIOD** The number of days between the contractor's receipt of a delivery order (or a call against a delivery order) and the removal of all property identified on the order is the removal period. This is often a compromise between storage limits and contract cost (shorter removal periods generally increase costs). Our experience has shown that a 10 working -days removal period is usually the best compromise between these two factors. If necessary, removal time frames can be CLIN specific; for example, you may have a standard removal period for most CLINs on your contract and another removal timeframe for a few specific CLINs.

A)	ROUTINE –	10	wor	king	days
----	-----------	----	-----	------	------

NOTE: If this removal timeframe will not meet your requirements, indicate here what removal timeframe you need	anc
please explain the reasons.	

B) SPECIAL REQUIREMENT CLINs – Please indicate any specific CLINs with special removal needs:

CLIN(s)	REMOVAL (days)
CLIN(s)	REMOVAL (days)
CLIN(s)	REMOVAL (days)

- C) **EXPEDITED** Select only if you anticipate **occasionally** requiring shorter removal time or performance periods for services than routine. CLIN E6600 covers a maximum amount of lbs./kgs for expedited removal for a single waste stream. The unit of issue covers each time expedited performance is required. **Indicate your requirement for expedited removals using CLIN E6600 in Attachment 1.**
- **3.** <u>HOURS OF OPERATION</u> Contractors may be prohibited from performing work on-site on federal holidays. Also, there may be some instances where the flow of government work will not permit pickups on certain days. Please identify times/days during normal work hours when the contractor will **not** be able to work on your installation.

SERVICE CLINs

RECYCLING - DRMS encourages recycling primarily to reduce potential government liability. Many of our HM/HW generators use recycling to obtain waste minimization credit. **NOTE**: What qualifies for waste minimization credit varies somewhat from country to country and from state to state within a country. Generators need to confer with their regulators to determine if any items recycled using special CLINs will qualify for waste minimization credit.

Special Notes:

- 1. Often items disposed under our normal CLINs are recycled; use of a **special** CLIN makes recycling **mandatory**.
- 2. Although recycling costs are sometimes less than for normal disposal, this is not always the case.

Describe in this table your recycling requirements. Identify the commodities and the quantities to be recycled and any known potential supply sources for such recycling. Attach Hazardous Waste Profile Sheets to this Menu of Services for all waste streams you wish to be recycled.

COMMODITY	QUANTITY (KG)	SUPPLY SOURCE

3. BULK REMOVAL/ TANK CLEANING

- a. DRMSI can provide for removal of hazardous waste stored in tanks, vats, oil water separators, etc. The contractor will be required to remove all liquids and sludge from tanks that can be removed without agitation or introduction of other materials to the tank under the standard CLINs. (Sludge or solids that cannot be removed without extraordinary measures can be removed using tank cleaning CLIN E6603. Normally, bulk removal is ordered for bulk tanks only. Please ensure quantities listed here are also included in the estimated disposal requirements you provide under the appropriate Bulk Liquids CLIN in Attachment 1. For all tanks requiring bulk removal, provide the information required in the table below.
- b. When CLIN 6603A-6603D is ordered, the contractor shall clean tanks, totes, oil/water separators, etc. until no visible residue remains. Sludge, debris, etc., remaining inside the tank after the bulk removal was completed will be removed during the tank cleaning process. Cleaning can involve human access to a tank, washing with a solvent or other detergent, scraping, scrubbing, shoveling, brushing, and containerizing of solids/sludge. The above listed CLIN does not include tank pumping or disposal of sludge/solids removed during the cleaning process. If required, tank pumping will be ordered under the appropriate CLIN for the pumpable waste contained in the tank in accordance with clause C. 29. Disposal of unpumpable sludge/solids removed as part

Menu of Services June 2000 Page 9 of 20

of the cleaning process will be ordered via the appropriate disposal CLIN based on the most previous known contents in the tank. (For example, sludge removed from a tank known to contain oil wastes may be assigned CLIN E1366.) This CLIN will appear on the delivery order issued for tank cleaning. However, the quantity listed on the delivery order will be an estimated quantity.

In all cases the Government will ensure the pumpable waste in the tanks are removed prior to tank cleaning. Tank cleaning is normally performed after bulk removal has been accomplished. (For each tank to be cleaned, bulk removal data is required in the table below and at Attachment 1). The unit of issue for tank cleaning is "each" and indicates the number of times this service is required by the generator. This is based upon the number of tanks to be cleaned and the frequency of cleaning for those tanks.

If tank cleaning is required, provide the following information:

CLIN	LOCATION	BLDG.#	EST. TO BE PUMPED KG/YR	TYPE OF TANK	CAPACITY OF TANK (gallons)	# TIMES TO BE CLEANED/ YR
				☐ Above ☐ Below		
				☐ Oil/water separator

				☐ Oil/water separator		

Menu of Services June 2000 Page 10 of 20

For	each of the tanks listed above, identify any unusual requirements, e.g.,
	Distance to nearest tanker parking area.
	Is confined space entry required?
	Will self-contained breathing apparatus gear or respirators be required?
	Are special solvents or other cleaning solutions required? If box is checked, please identify type required in the following space:
	Will the Government provide water (for cleaning and refilling in the case of oil/water separators)? YesNo

For each block checked above, please indicate which tank(s) and describe the situation. (If you have questions on the degree of detail required please contact our staff.) Please provide additional information in the space below:

(NOTE: If the contractor elects to introduce liquids or other materials to tanks to facilitate the removal of sludge/solids, the contractor shall monitor through metering, weighing, or any other approved measuring technique the amount of liquids or other materials introduced into the tank. The weight of the liquids or other materials introduced to the tank will be subtracted from the total weight of the wastes removed from the tank.)

Menu of Services June 2000 Page 11 of 20

4. <u>ANALYSIS/TESTING/PROFILING SERVICES</u> - Testing and analysis services can be made available through the disposal contractor using CLIN E6601. **List your requirements for types of analyses and quantity below.** (Attach additional sheet, if necessary). The unit of issue is "each".

Type of Analysis	Quantity

In addition, the Hazardous Waste Profile forms required for turn-in of hazardous waste to the DRMO can be prepared by the contractor (by requesting either CLIN E6602 or E6609C. CLIN 6609C is only for preparation of the profile form and does not include any testing or analysis. CLIN E6602 is for both analysis and profile sheet preparation and is generally used to identify a totally unknown waste.

5. WASTE IDENTIFICATION, SEGREGATION AND PACKAGING/REPACKAGING ('LAB PACKS')

CLIN E6604 is used when the generator has miscellaneous wastes, which needed to be sorted, identified and packaged. Current DOD policy prohibits generators from lab packing prior to turn-in to the DRMO (see DOD 4160.21-M). This is intended to permit maximum reuse of excess property. However, the generator can obtain lab-packing service from the contractor for items to be removed under the hazardous waste disposal contract. The important thing to remember is that our contractors routinely lab-pack waste for disposal so it meets UN shipping requirements. Selection of this lab-packing service is useful solely to minimize the handling and paperwork involved with turn-in to the DRMO. Lab packing of small quantities of chemicals enables the turn-in activity to prepare just one DTID for the chemicals. This can significantly reduce the documentation and transportation efforts for both the turn-in activity and the DRMO. Pre-coordination with the DRMO is necessary so the DRMO can determine whether or not the items to be lab packed can bypass the disposal cycle and move directly to disposal by service contract.

When lab packing is used, the generator shall provide the DRMO a list of the property to be turned in as a part of the pre-coordination process. If approved, the generator must provide a work area (preferably indoors with adequate lighting, heat/cooling, storage and work space) for the Contractor to lab pack items and during the lab packing process the COR (or generator representative) will be present. The contractor will prepare a drum/container inventory, listing each item by noun name, weight, number and size of containers per line item and hazard class. Actual weight will be used for items on the inventory list.

If you require this special Lab-packing service, please indicate your requirements under CLIN E6604 in Attachment 1.

Menu of Services June 2000 Page 12 of 20

MANAGEMENT SERVICES

The **management services CLIN E6609** provides the generator with assistance in managing his hazardous waste program. It includes:

- a) Providing collection containers
- b) Packaging/Over-packing
- c) Marking and labeling containers
- d) Completion of DD 1348-1's and Hazardous Waste Profile Sheets (HWPS)
- e) Management of Hazardous Waste Accumulation Points and/or Hazardous Waste Storage Areas
- f) Specialized testing
- g) Hazardous property pickup and transportation

Customized special services can be developed for your sites. DRMSI Statement of Work and Contracting experts continue to expand the scope of services obtainable through our contracts. DRMSI's extensive experience and contractual connections have allowed many unique situations to be resolved. Our newest special services includes:

- a) Conducting hazardous waste training
- b) Re-packaging of cylinders
- c) Specialty recycling
- d) Pierside removals
- e) Supporting unusual pickup points, an island or overseas
- f) Dealing with emergency situations.
- g) Spill clean-up

If you require any services not addressed in this menu of services contact the DRMS office indicated on page 3 of this Menu of Services. A meeting or telecon can be arranged to identify your needs and determine how DRMSI can obtain the services you require.
